AGROSATI Attendance and Salary Calculation Guide

Presence and Access Dashboard - calculation rules, salary deduction, and examples

H- deduction | Absence conversion | Salary balance

1. Configurable Work Schedule

The dashboard uses the shifts entered in the **Parameters** tab. For AGROSATI, enter these shift starts:

Shift	Start	Scheduled end	Duration
Day shift	07:30	15:30	8 hours
Evening shift	15:30	23:30	8 hours
Night shift	23:30	07:30 next day	8 hours

All salary calculations use **22 payable days** and **8 hours per shift**. These values remain editable in Parameters.

2. H-: Late Arrival and Early Departure

The entry tolerance is 15 minutes. After that tolerance, H- is deducted in progressive 15-minute blocks.

Arrival after scheduled start	H- deduction
0 to 15 minutes	0 minutes
16 to 30 minutes	15 minutes (0.25 h)
31 to 45 minutes	30 minutes (0.50 h)
46 to 60 minutes	45 minutes (0.75 h)

```
Arrival H- = ceil((late minutes - entry tolerance) / 15) x 0.25 hour
```

Early departure follows the same 15-minute blocks after the editable exit tolerance. With a shift ending at 16:00 and a 10-minute exit tolerance:

Actual exit	H- deduction
15:50 or later	0 minutes
15:49 to 15:35	15 minutes (0.25 h)
15:34 to 15:20	30 minutes (0.50 h)

3. Absence Deduction

One confirmed absence day

For exactly one confirmed absence, the dashboard converts the day into payable hours without rounding it to a full day.

```
Converted day = 1 x 22 / 30 = 0.7333 day
```

```
Absence hours = 0.7333 x 8 = 5.8667 hours (about 5 h 52 min)
```

```
One-day absence deduction = absence hours x hourly salary
```

Two or more confirmed absence days

The previous rule remains active: convert days with **days x 22 / 30**, then round to the nearest full payable day.

Confirmed absences	Conversion	Payable absence days used for H-
2 days	2 x 22 / 30 = 1.4667	1 day
3 days	3 x 22 / 30 = 2.20	2 days
4 days	4 x 22 / 30 = 2.9333	3 days

4. Salary Values

```
Daily salary = base salary / 22
```

```
Hourly salary = base salary / 22 / 8
```

The full H- amount combines the absence deduction and machine-based lateness/early-departure deduction.

```
H- amount = absence deduction + (late/early H- hours x hourly salary)
```

5. Worked Example

Employee base salary: 24,000 DA

One confirmed absence: 0.7333 day = 5.8667 hours

Additional late/early time: 1.5 hours

H+ declared in payroll: 1,500 DA

```
Daily salary = 24,000 / 22 = 1,090.91 DA
```

```
Hourly salary = 24,000 / 22 / 8 = 136.36 DA
```

```
Absence deduction = 5.8667 x 136.36 = 800.00 DA
```

```
Late/early deduction = 1.5 x 136.36 = 204.55 DA
```

```
Total H- = 800.00 + 204.55 = 1,004.55 DA
```

```
Final balance = 24,000 + 1,500 - 1,004.55 = 24,495.45 DA
```

6. H+ Overtime

> **Current dashboard behavior:** the displayed H+ amount is read from the legal payroll journal. It is not yet calculated from machine exit time.

The agreed future machine rule for H+ is:

- Any overtime from 1 to 15 minutes is credited as 15 minutes.
- After the first 15 minutes, each started 5 minutes adds 5 minutes.
- Example: a 16:00 scheduled exit and 17:00 actual exit equals 60 minutes H+.

Machine H+ should be compared with H+ declared in payroll. Only approved/payroll-declared H+ should be added to the final salary balance.

7. Final Salary Balance Display

```
Final balance = salary base + real H+ from payroll - calculated H-
```

The dashboard intentionally does not display Net a payer in this control. It focuses on the attendance effect on the salary base.
